

## UNX ANNOUNCES NEW EQUIPMENT-FREE DISPENSING OPTIONS

**Greenville, N.C.** (December 30, 2020) – UNX Industries, Inc., a leading innovator in commercial cleaning solutions, announces the launch of its new SimplePour bottle and jug pump dispensing solutions for facilities looking for quality commercial products in economical quantities. Both options will be available starting in January 2021.

Many facilities do not consume the annual volume of chemical to justify a wall-mounted dilution system. These operations are often challenged by the cost, storage and mixing of necessary cleaning chemicals. Inaccurate concentrations can be wasteful or, conversely, ineffective. Purchasing and storing large quantities of pre-mixed cleaning products can strain both budgets and storage space.

The UNX SimplePour bottle solves for these challenges – offering an easy-to-use, accurate dispensing option that allows product to be purchased in smaller, highly-concentrated quantities that use less storage space. Dilution is simplified by squeezing the appropriate amount of chemical into the integrated reservoir and pouring into a reusable spray bottle which is filled with tap water. Additionally, UNX now offers jug pumps for one-gallon containers, available in ¼ ounce, ½ ounce and 1 ounce pumps.

“The last few years our team has run into customers who would like to use the UNX Housekeeping products, but whether for budget, space or volume constraints just weren’t able to use the dilution equipment we typically offer,” said Todd Clements, COO and president of Institutional Sales. “So we challenged ourselves to come up with a solution. The SimplePour bottle now makes it super easy for these customers to take advantages of our top-quality cleaning products, but on a scale that works for them.”

Concentrated cleaning chemicals like those in the SimplePour bottle can help operations realize additional savings through significantly lower shipping costs and reusing rather than replacing spray bottles. One 32-ounce SimplePour bottle using a single spray bottle could potentially replace over 75 pre-mixed spray bottles, conserving both valuable facility storage space and landfill space.

The SimplePour bottle will be available exclusively for select products in the UNX Housekeeping line which offers 16 products across seven categories ranging from air fresheners to general purpose cleaners to sanitizers and disinfectants.
